SUMMARY

Aspiring Full-Stack Developer with hands-on experience building web applications using Python, FastAPI, Flask, REST APIs, SQL, Vue.js, SQLite, PostgreSQL and Flask-SQLAlchemy. Strong foundation in Data Structures & Algorithms, database design, authentication systems, CRUD operations, and API development. Currently pursuing a BS in Data Science and Applications at IIT Madras and interested in building scalable backend systems and production-grade software applications.

EDUCATION

Indian Institute of Technology Madras

BS in Data Science and Applications (Pursuing)

Sri Krishna College of Engineering and Technology, Coimbatore

B.Tech – Computer Science and Business Systems, CGPA: 7.5/10 2021–2025

PROJECTS

Smart Task Manager API | FastAPI, PostgreSQL, SQLAlchemy 2.0, Pydantic, REST APIs, API Router

- Developed a RESTful Task Management API using FastAPI, PostgreSQL, and SQLAlchemy 2.0 with complete CRUD functionality.
- Implemented database session management, ORM-based data modeling, request validation using Pydantic, and dependency injection using FastAPI Depends.
- Integrated Swagger/OpenAPI documentation for API testing and followed modular backend architecture using APIRouter.
- GitHub: github.com/22F1000765/smart-task-manager

Vehicle Parking Management System | Flask, Vue.js, SQLite, Flask-SQLAlchemy

- Developed a full-stack parking management application with role-based authentication, parking allocation workflows, and REST API integration.
- Designed relational database schemas using Flask-SQLAlchemy and implemented CRUD operations for parking lot and booking management.
- Integrated frontend and backend components and managed project development using Git and GitHub.
- GitHub: github.com/22F1000765/Vehicle_parking_app_v2

Hospital Management System | Flask, SQLite

- Built a database-driven healthcare management application supporting patient registration, appointment scheduling, and medical record management.
- Implemented relational data models and end-to-end CRUD functionality for healthcare workflows.
- GitHub: github.com/22F1000765/Hospital_Management_System_V1

AI-Based System Threat Forecaster – Malware Detection | Python, Scikit-learn, Pandas, NumPy, XGBoost

- Developed a machine learning pipeline on 100K+ telemetry records with feature engineering, model training, and hyperparameter tuning.
- Evaluated Logistic Regression, Decision Tree, Random Forest, and XGBoost models for malware classification.
- Kaggle Notebook: kaggle.com/code/nmpranitha/22f1000765-notebook-t12025

TECHNICAL SKILLS

Languages: Python, SQL, Java

Backend: FastAPI, Flask, REST APIs, Pydantic, APIRouter, Flask-SQLAlchemy, Swagger/OpenAPI

Frontend: Vue.js, HTML, CSS, JavaScript

Database: SQL, SQLite, Relational Database Design, CRUD Operations, ORM Concepts

Tools: Git, GitHub, VS Code

Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms, Authentication, Client-Server Architecture

ACHIEVEMENTS

- Ranked 538 out of 4208 participants (Top 13%) in the Kaggle Diabetes Prediction Competition.
- Built multiple end-to-end software projects involving REST APIs, databases, authentication systems, and machine learning.
- Pursuing BS Degree in Data Science and Applications from IIT Madras.
